about

I spent four years in crypto as an active user: following airdrop projects and joining their Discord and Telegram communities. That gave me a working understanding of web3, crypto, and blockchain from the user side: how claims, vesting, and token unlocks work, how to keep a wallet safe, how to read a block explorer, and how to spot a scam before it costs someone their funds.

I am looking for roles in community support, moderation, and content/research. I write short, clear answers and check the documentation before replying.

communities

Sui **Tabi** **Walrus** **Plume** **Caldera** **Meteora**

Previously a regular member, mostly on Discord and Telegram. I have not held an official role such as moderator or ambassador.

skills

Community management

Member engagement and support, onboarding new members, relaying community feedback to project teams, monitoring sentiment, events, AMAs, and giveaways.

Moderation

Discord and Telegram moderation, enforcing community guidelines, spam, scam, and phishing detection, conflict resolution. Familiar with ambassador programs.

Content and research

Crypto content writing (posts, threads, guides), project research covering tokenomics, team, roadmap, and risks, simplifying complex topics for general audiences, fact-checking.

Web3 knowledge

Blockchain, DeFi, and NFTs. Airdrops, vesting, and token unlocks. Wallet security and approvals. Block explorers and on-chain basics. Layer 1 ecosystems.

Trading and DeFi

Crypto trading, degen (early-stage and high-risk on-chain plays), liquidity provider (LP), airdrop farming.

Working style

Clear written communication, calm under pressure, independent and remote-ready.

learning

Blockchain development
