location
Indonesia, remote (UTC+7)

availability
Full-time, fixed schedule

languages
Indonesian (native), English (written)

## profile

Administrative work with a records-first habit: enter it once, enter it correctly, and make it findable later. Four years handling daily data entry, incoming project intake and invoicing in a furniture company, plus a divisional leadership role running an organization's social media. Detail accuracy under volume is the part of the job I actually enjoy.

## experience

### Administrative Staff

Furniture manufacturer — Indonesia

- Entered daily transactions and reconciled them at end of day, so the ledger matched the paperwork.
- Received incoming project orders, logged specifications and client details, then passed them to production with a written brief.
- Issued and printed invoices; checked amounts, client names and project references before release, and filed each order so it stayed traceable months later.

### Head of Media & Information Division (Kominfo)

Student organization

- Ran the organization's social media accounts end to end: planning, writing, publishing, and replying to incoming messages and comments.
- Coordinated a small team, assigning who publishes what and holding a posting schedule the organization could rely on.
- Wrote event announcements and adapted the same message per platform; routed questions needing a decision to the relevant division rather than answering vaguely.

### Freelance — Graphic Design & Data Entry

Independent, per-project

- Designed layouts and produced visual assets per brief; delivered print- or post-ready files.
- Handled high-volume data entry and cleanup — deduplicating records, fixing inconsistent formats, keeping totals correct — and scoped, quoted and delivered work directly with clients.

### Crypto Protocol User & Community Participant

2023 – present

Independent

- Active across Solana and EVM protocols: airdrops, vesting and claim flows, token locks, testnets, wallet recovery.
- Know the failure modes first-hand — unclaimed allocations, wrong-wallet submissions, tokens that never unlock, exchange addresses that cannot receive a claim. Screen token safety before interacting: mint and freeze authority, holder concentration, liquidity locks, honeypot and tax checks.

## skills

**Administration**
Daily data entry at volume, record keeping, invoicing, project intake, document filing, reconciliation, accuracy checks before release.

**Communication**
Written English and Indonesian, replying to public messages, announcements, explaining a process step by step, escalation to the right person.

**Social media**
Account handling, content planning and scheduling, writing for each platform, graphic design for posts, responding to comments and DMs.

**Tools**
Google Sheets and Excel, Google Workspace, Canva, Discord, Telegram. Familiar with Intercom-style ticket queues, Notion and CRM-style records.

**Web3 knowledge**
Blockchain, DeFi, NFTs. Airdrops, vesting and token unlocks. Wallet security and approvals. Block explorers and on-chain basics.

**Technical**
Python scripting for data cleanup and reporting, SQL basics, Linux command line. Currently learning blockchain development.

## communities

**Sui** · **Tabi** · **Walrus** · **Plume** · **Caldera** · **Meteora**

Active member across these crypto communities, mostly on Discord and Telegram.
